E-Paper – Future developments

Information on the further development of E-Papers

The production lines of our E INK authorized partner for glass-based, graphic E-Paper were completed until the end of 2016 for the serial production Of monochrome and three-color displays (black / white / red). Our standard list is giving you an accurate overview of the current available sizes.

Further processing steps which are going to make the E-Paper technology even more attractive for many applications, are in planning.

As may be the case, delays in the timetable are possible for developmental reasons.

Further developments of E-Paper technology
